Setting the electricity tariff information

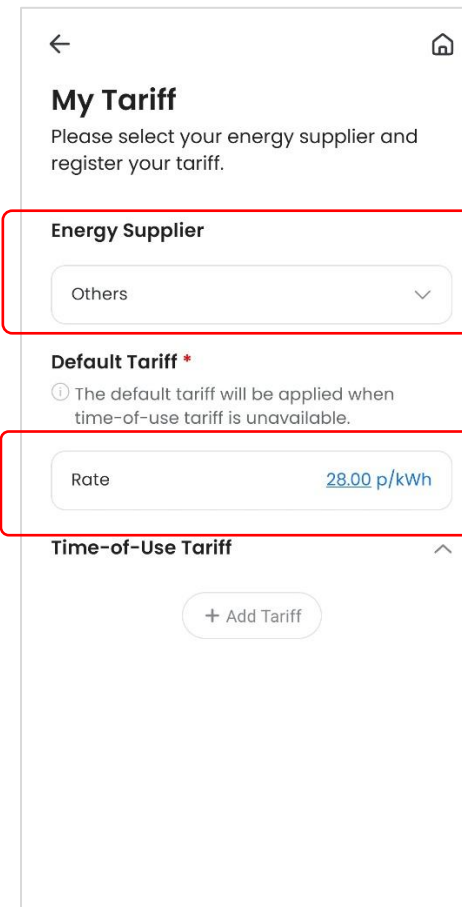

Configuring your energy tariff details enables more precise calculation of electricity usage during EV charging. You may enter time-based rates if these are included in your electricity tariff

SETUP

1. Go to Settings and select Energy Tariff.

2. Set Default Tariff

Select Name of the energy provider.

Select the field to enter Basic rate.

1.1

Setting Time Based Rate

If your electricity tariff provides cheaper rate during specific time, add time-based tariff information.

SETUP

My Tariff

Time-of-Use tariff has been deleted. Please select your energy supplier and register your tariff.

Energy Supplier

Time-of-Use Tariff

Time Range

Start 12:00 AM

End 5:00 AM

11 12 00 AM

10 PM

Rate

10.00

Change

Select “Add” and select Start and end time, and enter rate of your time-based rate.

i.e. 12:00am – 5:00am 10p/kWh

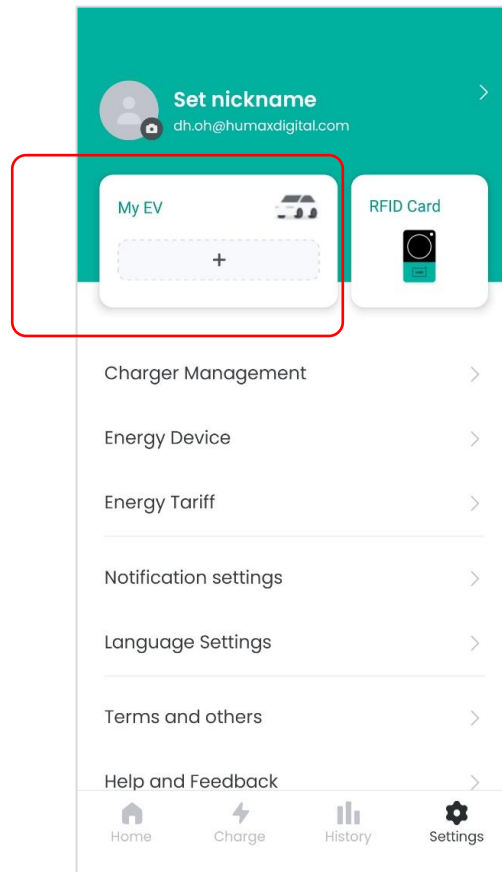

2

Registering Vehicles

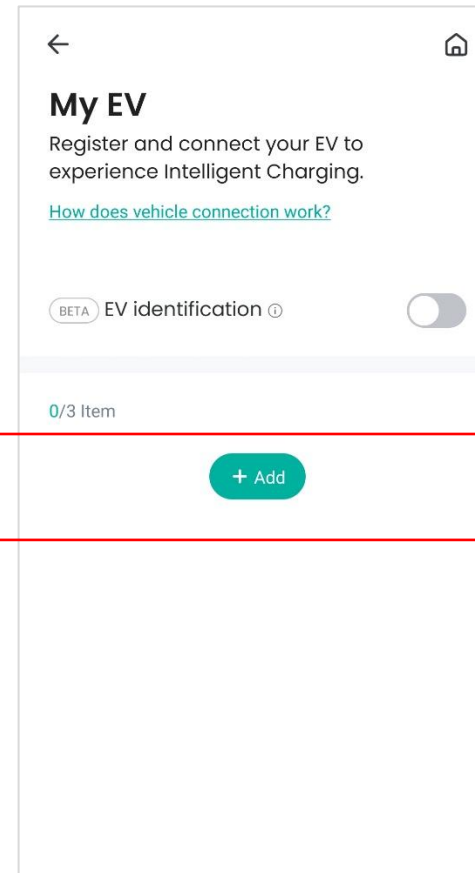

Humax Charge can automatically identify connected vehicles when plugged in. Vehicle identification supports various app features. You may also choose to permit charging for registered vehicles only. Charging history will be recorded for each registered vehicle, allowing easier analysis of individual charging sessions and energy consumption.

* Requires EV identification to be enabled.

SETUP

Go to Settings and tap 'My EV'

Click Add

If EV identification is enabled, connect your EV to the charger

EV identification (Beta)

Humax MX7 is equipped with PLC module that can communicate with car. Enabling EV identification will allow to identify car when connected.

2

Registering Vehicles

SETUP

← 

Connection Test

A test is required to confirm EV connection and availability of Intelligent Charging.

[What is Intelligent Charging?](#)

Please Confirm

-  Connect the EV to your home charger.
-  Set the charge limit higher than the current battery level.
-  Disable any other devices controlling the vehicle's charging.

Connection Test

Add Manually

Tap 'Connection test' – If your car's ID is read successfully, it will move to the next step automatically.

•**Note:** If it does not proceed, you may need to disable EV identification.

•**Nickname** – Enter a display name for your EV (e.g., "Dad's car").

•**Car Registration** – Enter the registration number to auto-load brand, model, and battery size.

•**Note:** If the car details are not in the database, enter them manually.

•**After Registration** – Once the car is registered and EV identification is enabled, connecting the car will recognise it automatically.

Note:

Not all vehicles support EV identification. Consider disabling it if:

1. The car shows as 'Unknown' despite being registered.
2. 'Connection test' fails during registration.

3

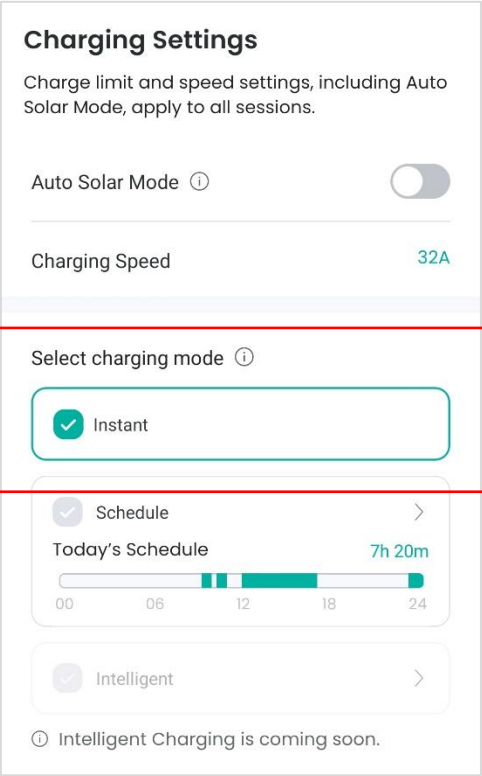

Charging Modes

Humax Charge provides three types of charging modes

1. Instant Charging

Simply plug in your EV to the charger and it will instantly charge.

SETUP

Select instant from charging modes

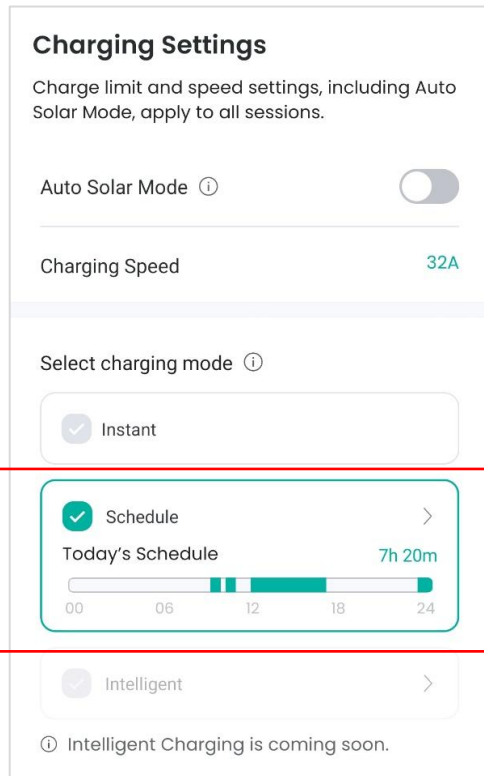

3

Charging Modes

2. Scheduled Charging

Set schedules of your charging sessions and it will start when time reaches.

SETUP

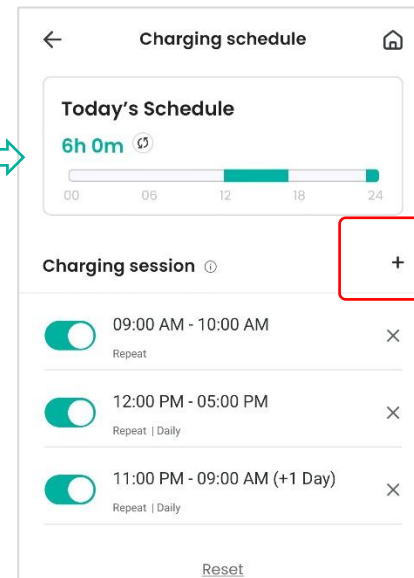

How to add schedule

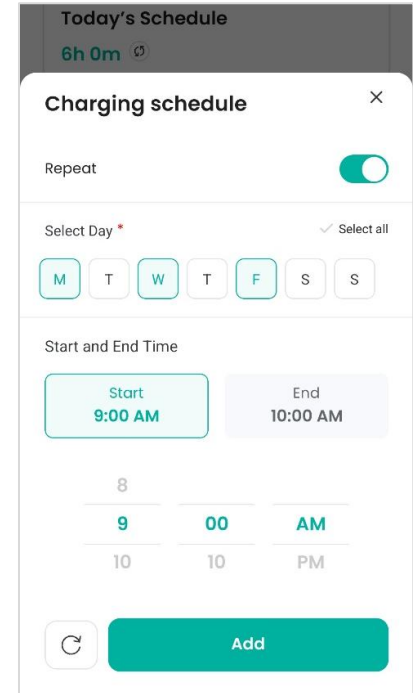

Select 'Schedule' from Charging modes.

To set a schedule

Tap '>' next to Schedule in 'Charge' menu.

Tap + icon next to add Charging session

Repeat – Enable if you want the session to be repeated weekly

Select day – Select days of the week when you want the session to be scheduled. Tap 'Select all' if you want the session to be daily.

Start time / End time – Tap each area and scroll up and down to set start and end time of the schedule. It may not create new session if your set time duplicates with already enabled schedule sessions. Disable the duplicated schedules to add new.

* You will need at least one charging schedule to enable the 'Scheduled charging'

3

Charging Modes

3. Intelligent Charging

Intelligent Charging – Charge your EV for your desired amount at the most cost-effective time. Just plug in, and the app will select the charging duration based on cheaper electricity rates.

You can set how much more to charge based on your EV's current battery level.

↺

Add

Set desired charging amount in % i.e. 50%

Set 'Ready by' time i.e. 6:00am

*Requires EV identification, car registration, and tariff information.

Human*Requires a time-based tariff with off-peak rates

4

Solar Mode

If you have solar panels at home, you can set to charge your car whenever there is surplus electricity from solar panel.

SETUP

Charging Settings

Charge limit and speed settings, including Auto Solar Mode, apply to all sessions.

Auto Solar Mode ⓘ

Charging Speed

32A

Go to Charge and enable Solar.

Select correct monitoring device. Selecting incorrect device may cause charging session.

Select Device

The charger may not function properly if the installed device is not your home energy monitor.

CT

Monitors current.

SmartMeter

Monitors power and current.

Confirm

Simply plug in the car, and charging will start automatically when solar surplus happens.

If solar surplus is happening whilst your car is not plugged in, the app will notify you to plug in.

You can also monitor charging status from main screen and history.

Solar charging will be shown as yellow in the History.
